

INTERIOR CONCRETE DYE

EAGLE INTERIOR CONCRETE DYE transforms plain concrete into an elegant, decorative surface without the intensive labor and harsh chemicals of acid-based stains. **INTERIOR CONCRETE DYE** is a penetrating dye that quickly adds semi-translucent color to beautifully enhance the appearance of indoor concrete surfaces. These semi-transparent, “Nano-particles”, allow variations in the substrate to show through, enhancing the final look while creating a durable treatment that will not wear away with traffic.

Available in 17 stylish, earth-tone colors, **INTERIOR CONCRETE DYE** can be applied uniformly or mottled to give the appearance of an acid-stained surface. Colors may be applied singly, blended prior to application, or applied one over the other for endless decorative options. Simply dilute **INTERIOR CONCRETE DYE** with water, mix well, and spray on a properly prepared concrete surface. With its rapid dry time, **INTERIOR CONCRETE DYE** can usually be sealed the same day it is applied, saving time and minimizing inconvenient down time!

EAGLE INTERIOR CONCRETE DYE must be sealed to protect the color from long term wear. **Mix with water ONLY.**
