HARDSCAPES

Broomed Concrete | Stamped Concrete | Concrete Pavers | Exposed Aggregate
200 sq. ft./gallon | 200 sq. ft./gallon | 75-100 sq. ft./gallon | 100 sq. ft./gallon

INSTRUCTIONS

1. Clean oil spots with our **EAGLE CLEANER DEGREASER NEUTRALIZER** or de-greasing soap and water. This step is not required if there are no oil spots.
2. For surfaces not porous enough for water to easily soak in, etch concrete with **EAGLE ETCH & CLEAN**.
3. Pressure wash concrete with 3000 psi or higher. It is imperative to thoroughly clean concrete before sealing.
4. Fill any cracks with our **EAGLE CRACK FILLER**.
5. Allow concrete to dry for 24 hours without rain before sealing. Do not seal if rain is imminent (usually 24 hours).
6. Temperature of air and concrete should be above 50°F and below 90°F during application.
7. Use short nap roller (1/4" - 3/8") for smooth concrete and long nap roller (1" - 1-1/4") for rough textures such as exposed aggregate. Most exterior concrete will need a medium nap roller (1/2" - 3/4").
8. Anti-Skid additives (not sand) may be added to second coat for added traction.
9. Test a sample spot with sealer on concrete. Allow to dry. Be sure that the test spot has good adhesion and appearance is acceptable before proceeding.
10. Roll on concrete. Keep roller soaked with sealer. Dip on every stroke. Work sealer in "W" pattern.
11. Cross-Roll 2nd coat, working perpendicular to 1st coat. One coat applications should be cross-rolled during application.
12. Clean-Up with Xylene or Lacquer Thinner. Do not use Paint Thinner or Mineral Spirits.
13. Allow to dry 4 hours prior to foot traffic and 24 hours for auto traffic.
